United States

Summary

We’re a stealth-mode startup quietly engineering software that will transform how users interact with systems using state-of-the-art AI technologies. Our founding team is composed of seasoned technologists and inventors, each with a track record of building global product portfolios valued in the billions. Here, you won’t just follow a blueprint; you’ll take the wheel and help set the course, leveraging cutting-edge solutions to redefine what’s possible. If you’re driven by innovation and crave hands-on influence over both product direction and technical architecture, this is the place to make your mark.

Passion and Vision: I am deeply passionate about leveraging AI to solve complex technology challenges, building high performing teams and operational excellence to drive innovation and growth. By harnessing the transformative power of AI and automation, I aim to simplify IT operations and empower my team, customers, and partners with best-in-class solutions that deliver extraordinary value.

In past, I’ve had the privilege of leading high-performing, diverse global engineering teams across USA, Israel, China and India. I led teams that built Data Protection Products, Cybersecurity and Resiliency Solutions, and SaaS offerings for the PowerProtect Data Manager portfolio- a next-generation data platform renowned for its industry-leading performance, efficiency, and scalability.

As an Intrapreneur, I’ve successfully incubated and launched these new products, driving customer adoption across physical, virtual, and multi-cloud environments. Collaborating with Sales, Pre-Sales, Professional Services, and Support organizations, I scaled these innovations to generate billions of dollars in revenue.

I led Scrum@Scale transformation, aligning teams with modern architectures to deliver high-velocity, rapid-iteration products. I am a strong advocate for embracing Generative AI to accelerate product

development and redefine innovation cycles, enabling faster delivery and greater efficiency in building transformative solutions.

Beyond engineering, I've excelled in Business Development and Sales Enablement, driving 360-degree partnerships with Global System Integrators (SIs) and Service Providers (SPs). My leadership scaled revenue from <$25M to $300M+, leveraging sell-to, sell-through, and sell-with strategies.
In Global R&D Operations, I've spearheaded the growth of Global Competency Centers (GCCs) across India, China, and Egypt, expanding teams from fewer than 2,000 engineers to 7,000+ while establishing operational excellence.

Experience

MeshDefend
Co-Founder, CEO
January 2025 - Present (1 year 10 months)
Atlanta, Georgia, United States

Dell Technologies
17 years 6 months

Global Product Engineering Leadership Roles (Cyber Resilience/ Data Protection)
October 2018 - November 2024 (6 years 2 months)

Lead global engineering for the Cloud Data Protection, Cyber Security and Resiliency Solutions and SaaS product portfolio at Dell. My team is responsible for designing, building, and integrating these capabilities inside PowerProtect Data Manager suite, an innovative, next generation solution with industry leading performance, efficiency, and scale. PowerProtect Data Manager provides data protection for physical, virtual and cloud environments while significantly simplifying and automating IT operations. (References: PowerProtect Data Manager)
I am leading an engineering team incubating, building, and scaling industry leading Cyber Security and Resiliency Solutions. This solution protects and isolates critical data from ransomware and other sophisticated threats. Machine learning identifies suspicious activity and allows you to recover known good data and resume normal business operations with confidence. (Reference: PowerProtect Cyber Recovery)

I am focused on transforming the engineering culture and development methodology to modern DevOps and scrum practices. This has helped team increase speed to market through quarterly release, with achieving ‘known good state’ every 3rd sprint, meeting definition of done and resulting in improved quality. This has helped our customers adopt newly shipped innovations 3x faster than earlier.

I am passionate about True Ability Employee Resource Group. As an active core team member, I had privilege to envision “Skill at Dell” program which has now helped ~200+ Person with Disabilities (PwD) graduates to get trained in various soft skills and technology areas. I am part of the industry consortium “Together We Can”, that has brought together 6 global tech companies, NGOs, and education institutes to train and place PwD candidates in the IT industry.

Director/ Senior Director, Software Engineering - Data Protection SW
January 2017 - September 2018 (1 year 9 months)

Software Engineering leader with responsibilities to lead product engineering for data archiving and cyber resiliency products. Was also responsible for product delivery of Data Protection Software portfolio and driving Scrum Transformation.

Created 85+ scrum teams based on Scrum Inc's Scrum@Scale model. Enabled organization to execute out of 1 consolidated backlog (down from 13+) to deliver product release every 3 months (down from 9 to 12 months). As part of transformation led process and culture change including 1000+ engineers moving to quarterly release accelerating innovation for $3bn+ portfolio.

Created synergy across the DPSW current gen products to enable movement of ~45%+ investment/ resources to next generation product development. This resulted in successful launch of the PowerProtect SW – Next Gen Data Mgmt Platform.

Co-led the project involving 4 business units to design, develop and launch next gen data protection appliance, PowerProtect Appliance – Multi-dimensional Data Mgmt Appliance. The complexity of the project required 90+ scrum teams across 15+ locations to work together.

Director - Technology Solutions, APJ Theater (Dir, Sr. Mgr)
March 2015 - January 2017 (1 year 11 months)

Leading the team of Technology experts responsible for the APJ growth solutions, increasing EMC's technical mind share, revenue (through replicable solutions/ marquee deals) & Total Customer Experience (TCE) leveraging 10k + strong sales, R&D and services network.

Built a team of Technologists and created the execution framework with sharp focus on six strategic areas. Put in place success metrics, tracking mechanism (SFDC based tool) and was accounted for end to end technology solutions.

Identified & delivered 130M+ incremental revenue opportunity (qualified) pipeline from new solutions. Additionally led GTM enablement for 500Mn+ technology TAM opportunity working with global sales CTO office.

Global Engineering PM/ Operations, APJ R&D Centers (Sr. Mgr, Mgr)

December 2012 - February 2015 (2 years 3 months)

Part of APJ Centers of Excellence leadership team, Co-led operational integration of APJ centers encompassing ~7500 employees across the region (Bangalore, Pune, Shanghai, Beijing & Chengdu).

Deepened the relationship with global product & services owners from the Business Units by building Rhythm of Business (RoB) (weekly/bi-weekly/ quarterly process).

Led setting up of the new center for EMC in APJ. Screened 35 cities across APJ, developed an evaluation model (Talent, Customers, Geo-political factors, etc.), secured board’s approval & brought together cross-functional group (from across 12+ functions) to go from concept to 150+ employees on ground in less than 3 Qtrs.

India center grew by ~40% (+1.5k) during this period.

Engineering Lead, India Center Of Excellence

June 2010 - December 2012 (2 years 7 months)

Built the Management system & metrics to measure the performance of 50+ different teams for the EMC Global Engineering Center of Excellence.

Created & co-executed 3 year strategic roadmap for EMC’s India R&D Center. This included, building the framework, analyzing the portfolio, securing buy-in of local & global stakeholders and having the milestone based execution strategy.

Efforts contributed to two fold expansions of India operations (2k to 4k) with higher ownership & more strategic role across the board.

Business Development, Global System Integrators/Partners
October 2009 - June 2010 (9 months)

Responsible for BD efforts for global Indian SIs, worked with global sales and alliances organization to build a strategic roadmap to take the relationship from ~35M in 2008 to >100M+ by 2011 for 3 major Indian SIs.

Identified joint value proposition, built solutions packages, enabled the partners & EMC field, built the ~ 3 x pipeline and installed 360 relationship (sell-to, sell-through & Sell-with) dashboards/reviews with global stakeholders.

Efforts show gross revenue crossing 4x from focused partner by 2011.

Associate, Global Engineering Center of Excellence Programs
January 2008 - September 2009 (1 year 9 months)
Boston

Part of the global PMO for the Globalization Office focused on the Global Engineering Centers of Excellence (COEs) spanning across China, India, Russia, Israel, Egypt, Ireland, and North Carolina, reporting into Global Vice President.

Helped developing and managing partner portfolio ($160M in spend) governing utilization of EMC’s major offshore partners resulting in significant cost reduction of 40% in 2008/9.

Successfully developed and coordinated business processes, dashboards & Governance model for global shared services network, now considered a leading industry model.

Graduate Intern - Six Sigma Division
June 2007 - January 2008 (8 months)
Hopkinton, Massachusetts, United States

Education

Caltech
Post Graduate, Artificial Intelligence and Machine Learning · (January 2024 - December 2024)

UMass Boston

MBA, Operations, Finance & MIS

Gujarat University

Bachelors of Engineering, Computer Science
