MESHDEFEND

AI-OPS FOR INTELLIGENT, AUTONOMOUS & SECURE DATA INFRASTRUCTURE

Recovery you can prove. Operations without human error.

The agentic AI operations layer that lets Dell customers continuously prove critical applications can recover, and lets Dell deliver resilience as a differentiated managed service.

01

Risk Reduction

Continuously prove critical applications can recover, and bring data, applications and workflows back after a major disruption.

CORE DIFFERENTIATOR

02

Human Error Reduction

AI agents run policy-driven operations, cutting manual interventions, configuration mistakes and recovery-process errors.

CORE DIFFERENTIATOR

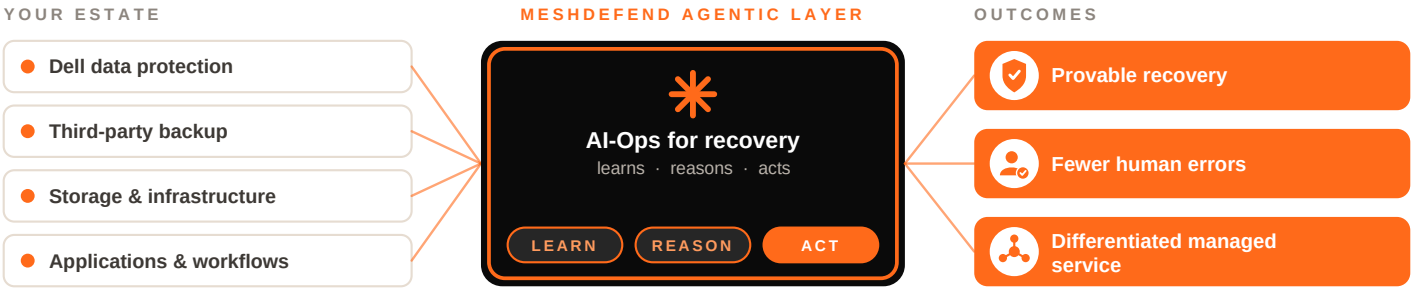

03

Differentiated Managed Service Delivery

One operational layer to run resilience, recovery and agentic recovery as a continuous service across heterogeneous environments.

CORE DIFFERENTIATOR

ONE AGENTIC LAYER ACROSS THE ENTIRE ESTATE

MAIN USE CASES

USE CASE 01

Continuous recovery assurance

Automatically test and score whether critical applications can really be recovered, and surface gaps before they matter.

USE CASE 02

Agentic disaster & cyber recovery

Coordinate recovery of data, applications and workflows to get the business operating again after a major disruption.

USE CASE 03

Autonomous multi-vendor operations

Agents monitor, triage and remediate backup and recovery issues across mixed environments, replacing repetitive manual work.

ALSO DELIVERS
Supporting ROI

- **Operational efficiency** — Less L1/L2 effort, faster MTTR
- **Lower cost to operate** — Savings quantified against your baseline

BETTER TOGETHER WITH DELL

Dell brings the enterprise relationship, advisory and implementation. MeshDefend brings the **operational layer** that keeps resilience running, day after day.

- Complements Dell advisory and implementation
- Plugs into the AIOps and observability tools in use
- Built for production support and joint go-to-market
