BUSINESS VALUE

Business Value: ROI with Improved Business Resilience

Organizations invest **millions of dollars** in business impact minimization, data protection, disaster recovery, cyber recovery and security as disparate investments. MeshDefend helps bridge these teams and tools, turning those investments into **continuous resilience** so teams **stay ready to recover at all times**.

MeshDefend Pays for Itself

- **Reclaim storage** from stale and redundant copies of data
- **Optimize** cyber scanning cost and coverage
- **Offload repetitive tasks** to MeshDefend's Agent Mesh™ with HITL/HIOL
- **Manage 30 to 50% more** infrastructure with the same team
- **Reduce recovery time** by hours when outages can cost $5K–$15K per minute
- **Lower** cyber insurance costs

Stronger Resilience Posture

- **Unify** business, IT infrastructure and security teams with a single pane of glass for establishing and managing resilience posture
- **Reduce** operational and cyber risks with Business Impact Analysis (BIA), Minimum Viable Company (MVC) mapping and live system dependencies
- **Ensure** business recovery, not just data recovery, across hybrid cloud and heterogeneous vendors
- **Faster** detection, triaging and remediation of deviations and failures
- **Improved** compliance and audit-ready evidence
- **Continuous** business resilience posture with always-on observability, validation and readiness
